

Introduction

This is a technical test for a Developer position at Whitetower, this test is designed to understand and review your existing knowledge of standard and popularly used frameworks, languages and technologies on the internet (eg JS / CSS).

This test must be completed within **72 hours of receiving it** and an email must be sent back to Wilson (wilson@whitetower.com.au) with confirmation of the completion of the task as well as the completed files.

Your code and speed of delivery will be evaluated.

Developer Skills Test

Overview:

Please use the following files:

1. Using any framework (eg. Express.js) to create a basic interface with a username and password authentication.
2. Connect to this API: <https://rickandmortyapi.com/api/character> and display a full list of all the characters from the Rick & Morty TV series. Noting the following information architecture to adhere to:

Page Name	Description	URL Structure
Login Page	This will act as the home page of the application and it will require the user to enter in their username and password to enter.	/
Registration Page	This will be a basic registration page requiring name, email and password.	/registration
Protected Character List	This will be a page that displays a full list of the Rick and Morty characters, but it should be accessible by the public.	/characters/
Protected Character Profile	This will be a page clickable through the character list page which should not be accessible by the public.	/characters/{id}
Saved Characters	Through the character list or single character profile pages, create a feature that can save your favorite characters to your account	/user/characters/

3. Inside the profile page of each character, have the ability to add the character to the account's favorite's folder. The profile page needs to also include:

- Profile Image using the active image in the API/JSON packet
- Character Name
- Species
- Gender
- List of Episodes they have been in
- Button to save to My Favorites

4. Have a link in the main navigation of the platform to display your account profile details and a separate tab to display all your favorite characters saved from point 3.

Output:

Upon completion of the technical test, the following must be provided and emailed to Whitetower:

- Publicly Accessible GIT Repository, including:
 - Instructions to install the platform
 - Description Commit Messages
 - Key maintained core GIT Files (eg. .gitignore, configuration files and [README.md](#))
- URL to the platform (feel free to use a free platform like Vercel / Render)

Evaluation Criteria:

This test is designed to be completed between 4-5 hours. The following points will be used to evaluate the candidate and review their ability to perform to the coding standards of Whitetower:

- Code Design / Quality: code should conform to a common coding standards:
 - DRY Coding Style: https://en.wikipedia.org/wiki/Don%27t_repeat_yourself
 - Descriptive Comments using descriptive blocks & inline comments when required
 - Error Handling and correct messages
- Ability to provide clear instructions on how to install and launch the website via the GIT repo.
- Architecture & Design Decisions
- Bonus Points will be focused on:
 - Functional UI/UX decisions
 - Optimised for speed using known methods such as caching, lazy loading etc.
